## FLEXIBILITY

 2mm

 1.5mm

## BUOYANCY:

The Fusion tiers buoyancy 3-4-4 with less overall buoyancy than the Reaction and Helix suits, but the ratio of buoyancy between the lower body and upper torso creates an optimal body position.

## CHEST: RATING 3mm:

Yamamoto SCS 3mm neoprene chest panel offers excellent buoyancy, as well as comfort.

## TORSO & LEGS: RATING 4mm

4mm Yamamoto panels in the hips and legs provides focused buoyancy, lifting the lower half of the body up and into alignment with the chest and head. This improvement in body position creates less drag, improving speed while conserving energy.

## FLEXIBILITY:

Our A-Flex orange jersey highlights the Fusion's highly flexible 4 way stretch 1.5 mm arms and underarm gussets.
