

## FEATURES

### TST PANELS:

Torsional Stretch Technology has been a standout feature of the Helix suits since the first model was released in 2005. The new Helix TST panels are further enhanced with functional design using A-Flex material in a swim specific multidirectional layout.

### REVERSE ZIPPER:

Our now legendary reverse zipper not only ensures a more sure swim, and a quicker suit exit, but reduces the need for a traditionally bulky collar, improving your comfort and making it easier to sight.

### AQUASEAL CUFFS:

The A-Flex 4 way stretch fabric in our 1mm cuffs wrap around the wrist to seal the arms from water entry, without catching when taking the suit off.

### AQUA FEEL FOREARMS:

Another world first; our ultra light, diaphanous AQUA FEEL forearms are made with a permeable fabric allowing the swimmer to feel the water through the suit. An increased awareness for the position of the arm in the water encourages better technique, greater power and reduces the risk of injury.

### KNEE FLEX PANELS:

Our 2mm textured KNEE FLEX panels assist with knee flexion by reducing bunching behind the knee and improve functionality when you need to run to T1.

### SINGLE SEAM TUBE LEGS:

Our tube construction in the lower leg, combines A-Flex material with a single seam to maximize the flexibility and promote a quick release from your suit in the transition. Liquid taping on the internal seam reinforces and allows you to cut the leg to your desired height.

In 2012 we've further enhanced our flagship Helix wetsuit with subtle pattern refinements and considerable material improvements. This year our Helix suit is designed to further impress with unparalleled flexibility while strategic materials and panels maximise buoyancy throughout the suit.
