

REACTION

FEATURES

VO2 CHEST CONSTRUCTION:

A central, double layered panel of 3mm neoprene laminated with our A-Flex material maximizes stretch during respiration and improves comfort.

LOWERED COLLAR:

Our curved closure flap reduces rear collar height improving comfort and reducing chaffing.

SINGLE SEAM TUBE LEGS:

Our tube construction in the lower leg combines A-Flex material with a single seam to maximize the flexibility and promote a quick release from your suit in transition. Liquid taping on the internal seam reinforces and allows you to cut the leg to your desired height.

KNEE FLEX PANELS:

Our 2mm Knee Flex panels assist with knee flexion by reducing bunching behind the knee and improving functionality when running to T1.

A-GRIP PANELS:

A textured forearm print onto our high stretch jersey allows the swimmer extra feel for the water and additional grip in the propulsion phase of the stroke.

Our most popular wetsuit ever, the Reaction has been completely overhauled in 2012. 100% Yamamoto Neoprene with SCS (SUPER COMPOSITE SKIN) coating provides a low drag external surface and impressive buoyancy. Combined with our A-Flex jersey lining, the Reaction delivers high performance flexibility and buoyancy.

AVAILABLE IN SLEEVELESS
